

(a) Parent-nuclide production component

- 50 mK MXC Cu cold plate (28.59%)
- TES substrate-support Cu panels (27.73%)
- Al cryostat/shield components (15.35%)
- TES-stack Cu heat-sink ring (10.18%)
- Near-field Bi liner (7.49%)
- Other DR/cold-stage hardware (5.26%)
- W detector-bay bottom plate (3.51%)
- BPE and residual BGO shielding (1.90%)

(b) Initiating primary particle

- Proton (65.87%)
- α particle (19.86%)
- Neutron (9.55%)
- γ ray (4.47%)
- $e^{\pm}$ (0.25%)
